

Horizon 2020 funded, EU MARINA Project invites you to take part in its first International Mobilization and Mutual Learning Workshop on “**Sustainable Maritime and Coastal Tourism, Sea Pressures and Responsible Research and Innovation – RRI**”, to be held in Venice the 4<sup>th</sup> of April.

The workshop is going to be focused on the question: *What policy, social, cultural, economic, technological, legal and environmental actions are needed for the tourism sector to be environmentally sustainable?*

If interested in participating please visit the event web page on [www.marinaproject.eu](http://www.marinaproject.eu) and **follow the instructions**. Participation could be limited to a fixed number of participants, but a **live streaming** will be available for all registered users in the MARINA RRI Community.

The EU MARINA project aims to integrate citizens’ visions, needs and desires into science and innovation, promoting **Responsible Research and Innovation (RRI) with focus on marine issues** and pressures that have important effects on the European societies.

Here the details on **how to join** the MARINA Community and actively contribute.

- **MARINA RRI Community.** The online Knowledge Sharing Platform catalyzes and organizes the convergence of already existing networks, communities, platforms and services providing a **socio-technical environment** that facilitates and stimulates the direct engagement of researchers, civil society organizations (CSOs), citizens, industry stakeholders, policy and decision makers, research funders and communicators for improving RRI. Once registered to the platform, you can share knowledge, create your own community and work on line. (**Register** at [www.marinaproject.eu](http://www.marinaproject.eu))
- **Mobilization and Mutual Learning Workshops (MML)** are collaborative events, with an international or local scope, organized around Europe to discuss, explore, propose and networking. Pollution, Tourism and Coastal Cities, Climate Change, Deep Sea Mining, Fishing and Aquaculture, Marine Biotech, Pollution, Renewable Energy, Sea Transportation are among the **issues** the MML go through. Deep analyses and follow up **materials are already available** within the Workshop section of project website.
